

Everyday life. Connected.

Feature catalogue | Uses, benefits, information needs and availability.

More together. Less scattered.

THE PRODUCT AT A GLANCE

One app. Several everyday needs.

Quiracle's purpose is to reduce the effort of organizing personal information, maintaining relationships and finding products or services.

01 Documents

Store and organize uploaded files; search, scan and explore chosen-recipient sharing.

02 Health

Maintain a record of reports, prescriptions, medicines and medical history for future reference.

03 People & memories

Explore family relationships, share photo posts, chat and build meaningful connections.

04 Marketplace & services

Browse items, explore selling and bidding, and discover professional or quick-help services.

A connected product story

Lead with one useful need. Introduce related features after users experience value, rather than asking them to use every module on day one.

01 / DOCUMENT VAULT

Documents that are easier to find.

For families, working professionals and anyone managing important records.

What the preview shows

Upload, Scan, Scan QR, New folder, document search, quick access, expiry/verification categories and a Vault Assistant entry.

An everyday use

Keep a certificate in an appropriate folder, find it later and review sharing options for a named family member or friend.

Information involved

The uploaded file, its title/category and available metadata. Avoid adding unnecessary identifiers to filenames or descriptions.

Sharing with intention

The interface includes Shared by me, Shared with me, sharing activity, Manage access and Pause sharing. Review the scope carefully, especially for whole-vault access.

Availability note

Controls were visible in the current preview. This review did not upload files, validate OCR, test government verification or certify access revocation.

02 / HEALTH RECORDS

A health history you can bring along.

Support better-prepared conversations by keeping relevant records together.

What the preview shows

Personal/family records, prescriptions, lab reports, medicines, allergies, hospital records, vaccines, record search, reminders and lab-trend tools.

An everyday use

Before an appointment, collect the relevant reports and prescription history, then check the patient and selected files before sharing.

Information involved

Health files and details the user chooses to add; patient identity, dates and medicine information where relevant. Handle these as sensitive information.

Care and consultation

Doctor-sharing and request interfaces exist. The proposed expanded Quiracle Care flow, specialty-search corrections and direct UPI/QR payments still require implementation or verification.

What this does not promise

Quiracle records support organization. They do not establish a diagnosis, guarantee doctor availability, replace medical care or provide emergency treatment.

03 / FAMILY, SOCIAL & CHAT

Keep your people and memories close.

A shared record of life includes people and moments, as well as files.

Family & Network

The current interface presents a family tree, Members, Circles and Timeline, with relationship filters and search by email, mobile or Quiracle ID.

Photo memories

The current product direction is photo-focused social posting. The dated review records photo choices, captions, location, audience controls, interaction switches and drafts.

Conversations

Chat is linked from the home screen. Direct and group communication can support family and community connections; this review did not certify delivery or attachment integrity.

Information and audience

Family relationships, chosen profile details, photo content, captions, chat content and selected audiences. Review what a post reveals about other people before publishing.

An everyday use

Share a celebration with the intended audience and continue the conversation in chat. Keep documents and health information separate from social posts.

04 / PLANNED INSTITUTION & BATCH MATCHING

Find a Friend. Reconnect through places.

Designed to help school friends, college batches and current or former colleagues find one another.

1 Add a shared place

Choose a school, college or workplace, with the correct institution and campus or office branch. Similar names alone should not create a match.

2 Add the time and context

Optional attendance or employment years; course and graduation batch where relevant. Unknown details should remain unknown, without invented dates.

3 Choose discovery

Opt in to being found through that affiliation. Review suggestions based on a relevant shared institution, batch or overlapping period.

4 Choose the connection

Send or accept a connection request. A suggested match does not prove someone's identity or guarantee that a lost contact will be found.

Availability: planned

The current specification defines this flow. Existing family search was visible, but a completed institution/batch matching release was not verified in this review.

05 / MARKETPLACE & LIVE BIDDING

Buy thoughtfully. Sell clearly. Bid wisely.

A place to discover products and explore value while keeping the final decision with the user.

Marketplace discovery

The current preview shows product search, categories, filters, locations, item condition, prices, seller badges and a Sell entry. Badges were not independently audited.

Seller journey

Prepare accurate item details and photographs, price and delivery terms, and follow seller eligibility requirements. Listing and order completion were not tested here.

Live bidding

Auction interfaces display current price, bid count and remaining time. The dated review also records a next-bid amount. Minimums, increments and deadlines must follow the listing rules.

Budget example - illustration only

If your total limit is Rs 2,000 and delivery is Rs 150, keep the item bid at or below Rs 1,850 before any other charges. Check all fees and comparable prices first.

Price and transaction limits

Bidding does not guarantee a discount or a win. Payment, winner selection, fulfilment, cancellation and refund workflows need end-to-end validation before broad promotion.

06 / QUICK HELP & HIRE PRO

Find help for everyday tasks.

Service discovery extends the product beyond personal records and social connection.

Quick Help

The dated review observed service categories, scheduling controls, availability summaries and booking-status information.

Hire Pro

The home and marketplace link to freelancers and professionals. Service requests can capture job details so providers understand the work.

An everyday use

Select a relevant service, provide the scope, review the duration and total charge, then check the date, address and confirmation state.

Information involved

Service requirements, requested time, service location and contact details needed for fulfilment. Give only the information needed for the requested job.

Coverage and availability

Services depend on actual providers and supported locations. A visible booking screen is not evidence of a completed provider dispatch or a nationwide service network.

07 / DATA AND USER BENEFIT

Understand what you choose to add.

A feature-level explanation of information use, not a substitute for the app's current privacy notice.

Account and profile

Supports account access and recognition by other users. Review public versus private profile fields and the current registration requirements.

Documents and health records

Supports organization, retrieval and selected sharing. Confirm recipient, patient, file scope and any expiry option; family affiliation alone should not grant access.

Photos, social activity and affiliations

Supports memories, conversations and planned discovery. Review audience and location settings; planned school/work discovery is optional.

Listings, bids and service requests

Supports discovery, transaction records and fulfilment. Delivery and payment information should be handled only through the applicable flow.

The exact policy must be confirmed

This review did not audit storage locations, retention, deletion, encryption, processors, analytics or legal compliance. Do not infer these from this catalogue or UI labels.

08 / AVAILABILITY & REVIEW NOTES

Know what is visible. Know what is next.

Evidence status as of 26 September 2026. This catalogue is a product overview, not an end-to-end test certificate.

Observed directly in this review

Home; document-vault organization and sharing entries; Health Records; Family & Network; marketplace listings, filters, auction entries and selling entry; social composer audience controls.

Additional current evidence

The 26 September verification report records targeted display checks for live bidding, Quick Help, social, chat attachments and news. These limited checks are not full workflow passes.

Planned or requiring further confirmation

Institution/batch discovery, expanded online consultation, revised specialty matching and direct doctor UPI/QR payments. No release date or live service readiness is asserted.

Explore and ask informed questions

Open the current app preview to inspect available features. Check supported platforms, pricing, provider coverage, permissions, payment/refund terms and current notices before relying on a workflow.

Sources and access

User-supplied Emergent preview; current Quiracle Verification and Correction, Find Your People, and Quiracle Care specifications, all dated 26 September 2026. Preview links can expire.
